W-Band Spot-Focusing Lens Antenna, 1" Focal Length

SAQ-943010-10-S1 is a W-Band spot-focusing lens antenna that delivers a 10 dB spot size of 0.18" at the focal length of 1.0". The antenna employs a low loss lens to offer excellent aperture efficiency in full W-Band frequency range of 75 to 110 GHz. The spot-focusing lens antenna is equipped with a WR-10 waveguide with UG-387/U-M flange as its antenna port. It supports linear polarized waveforms.

NOTE:

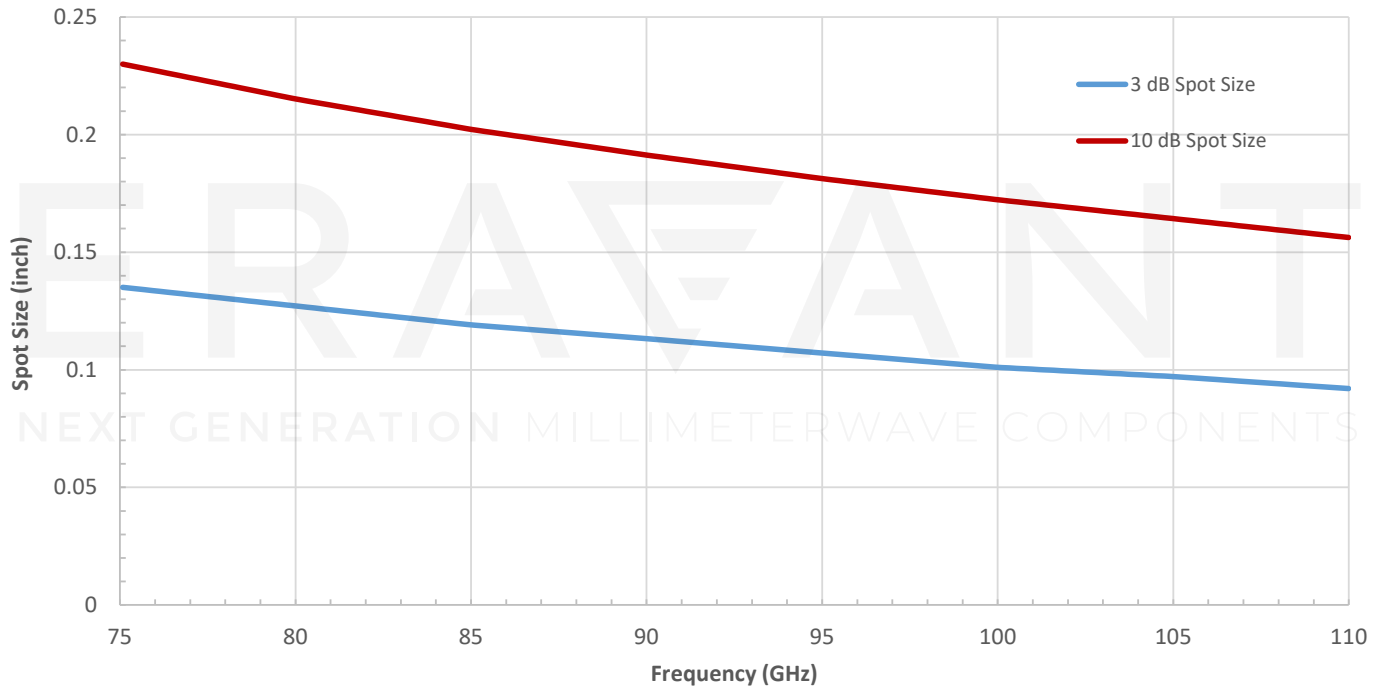

- On condition that test data is provided it is collected from a sample lot. Actual data may vary slightly from unit to unit. All testing is performed under +25 °C room temperature.
- On condition that simulated test data is provided, actual measured data may slightly vary.
- Eravant reserves the right to change the information presented without notice.

CAUTION:

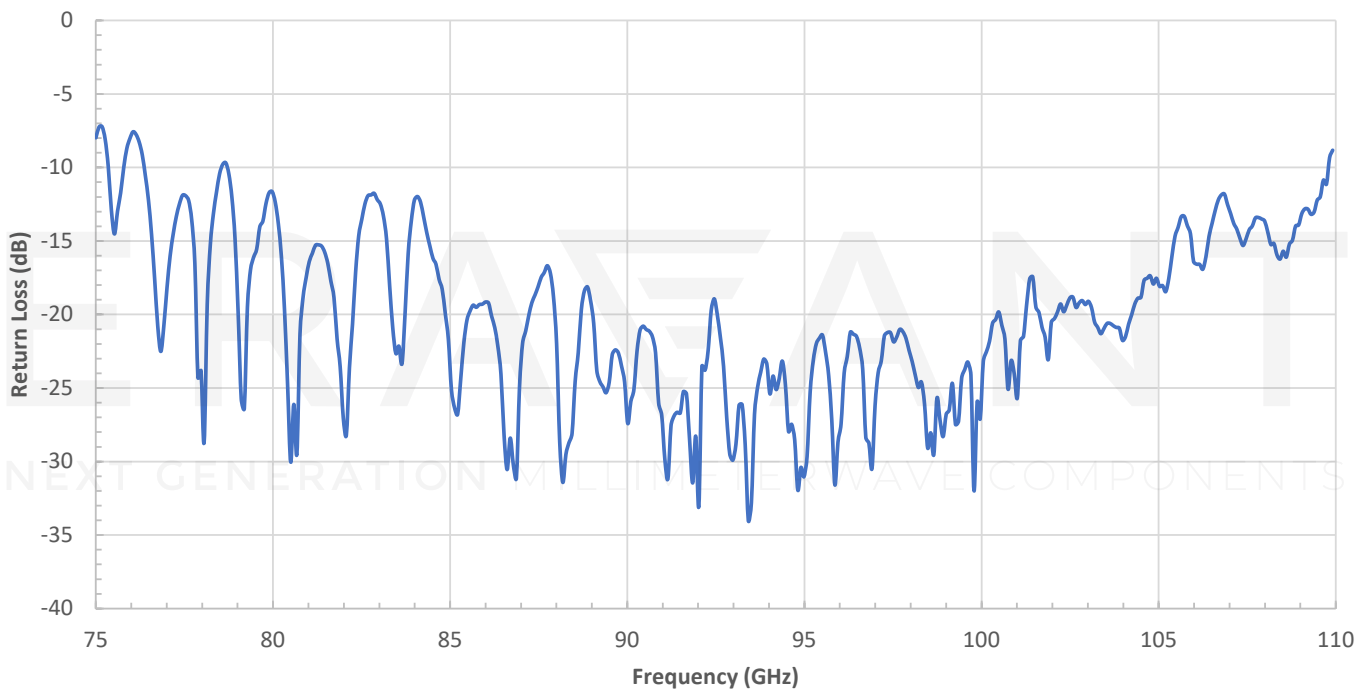

- If a waveguide is present, any foreign objects in the waveguide will cause performance degradation and may damage or destroy the unit.
- Any foreign objects in the antenna will cause performance degradation and possible device damage.
- For 1 mm connectors proper torque should be applied: 4.0 ± 0.15 inch-pounds (0.45 ± 0.02 Nm). Torque wrench model [SCH-06004-S1](#) is highly recommended.
- For 1.35 mm, 1.85 mm, 2.4 mm, 2.92 mm, and SMA connectors proper torque should be applied: 8.0 ± 0.15 inch-pounds (0.90 ± 0.02 Nm). Torque wrench model [SCH-08008-S1](#) is highly recommended.
