Rev 1.0

Ka-Band Low Noise Amplifier, 26.5 to 40.0 GHz, 30 dB Gain, 3.0 NF

Description:

Model SBL-2634033030-KF28-E1 is Ka band low noise amplifier with a typical small signal gain of 30 dB and a nominal noise figure of 3.0 dB across the frequency range of 26.5 to 40 GHz. The DC power requirement for the amplifier is +8 V_{DC}/150 mA. The mechanical configuration is an inline structure with K(F) connector as its input port and a WR-28 Uni-Guide™ waveguide as its output port. Other port configurations, such as K connectors and WR-28 waveguides for either the input or output port, are also available under different model numbers.

Features:

Note:

- All data presented is collected from a sample lot. Actual data may vary unit to unit.
- All testing was performed under +25 ˚C case temperature.
- The amplifier employs SAGE Millimeter's trademarked and patent pending technology, **Uni-Guide™**, as its waveguide interfaces. The orientation of the input and the output waveguides can be specified through corresponding model numbers. For example, the model number for a horizontal output waveguide configuration would be **SBL-2634033030-KF28H-E1** instead of the default **SBL-2634033030-KF28-E1** which indicates vertical orientation output.
- Other mechanical configurations are available under different model numbers.
- SAGE Millimeter, Inc. reserves the right to change the information presented without notice.

Caution:

- Exceeding absolute maximum ratings shown will damage the device.
- The device is static sensitive. Always follow ESD rules when working with the device.
- The case temperature of the device shall never exceed +50 ˚C. Use proper heatsink or fan if necessary.
- Any foreign objects in the waveguide will cause performance degradation and may damage the device.
