

K-Band Level Setting Attenuator, Head Locking Screw, 18 to 26.5 GHz

Description:

Model STA-30-42-M1 is a K-band level setting attenuator that covers the frequency range from 18 to 26.5 GHz. The attenuator features a precision micrometer dial with a knurled head locking screw, which allows for stable, repeatable settings that can be locked at any attenuation value. The level setting attenuator is an ideal piece of equipment in waveguide systems where broadband attenuation is required. The attenuator exhibits 0.2 dB typical insertion loss and up to 30 dB nominal attenuation value across

the entire operating bandwidth. The other attenuator types, such as <u>direct reading</u>, <u>programmable</u> and <u>fixed</u> tuned attenuators are also available under different model numbers.

Features:

- Full band Coverage from 18 to 26.5 GHz
- Head Locking Screw
- Precision Machined Housing
- Convenient Level Setting

Applications:

- Test Lab
- Instrumentations
- Manual Test Set

Electrical Specifications:

Parameter	Minimum	Typical	Maximum
Frequency	18 GHz		26.5 GHz
Insertion Loss		0.2 dB	
Attenuation	/IIIIIma	30 dB	20
Return Loss		20 dB	5
Power Handling		1 W (CW)	1.2 W (CW)
Specification Temperature		+25 °C	
Operating Temperature	-40 °C		+85 °C

K-Band Level Setting Attenuator, Head Locking Screw, 18 to 26.5 GHz

Mechanical Specifications:

Item	Specification	
RF Ports	WR-42 Waveguide with UG-595/U Flange	
Setting Type	Head Locking Screw Type Micrometer	
Micrometer Pitch	0.5mm	
Micrometer Resolution	0.01mm	
Insertion Length	4.00"	
Material	Brass	
Finish	Gold Plated	
Weight	9.0 oz.	
Outline	TA-MK	

Typical Measured Attenuation vs Frequency

K-Band Level Setting Attenuator, Head Locking Screw, 18 to 26.5 GHz

Mechanical Outline: (Unless otherwise specified, all dimensions are in inches [millimeters])

Note:

- All data presented is collected from a sample lot. Actual data may vary unit to unit.
- All testing was performed under +25 °C case temperature.
- For more information on the technical details of level-setting attenuators and other types of waveguide attenuators, a short instructional blog is available here (<u>FIXED</u>, <u>LEVEL SETTING</u>, DIRECT READING, AND PROGRAMMABLE ATTENUATORS)
- SAGE Millimeter, Inc. reserves the right to change the information presented without notice.

Caution:

- RF power should never exceed 1.2 W.
- Forcing the micrometer down after encountering resistance may damage the dielectric sheet inside. This will cause permanent performance degradation and decrease the long-term stability and repeatability of the device.
- Attempting to adjust the micrometer setting while the head locking screw is engaged may damage the micrometer and decrease the long-term stability and repeatability of the device.
- Any foreign objects in the waveguide will cause performance degradation and may damage the device.
