

V-Band Full Waveguide Band Down-Converter

STC-N12-15-S1-IDP is a V-Band down-converter that converts millimeter wave signals from a frequency range of 50 to 75 GHz to the baseband at 1.875 GHz. The down-converter requires 6.25 to 9.38 GHz at +10 dBm input power as its LO. An internal diplexer is included resulting in a single connectorized port for LO and IF configured for compatible spectrum analyzers, such as [Anritsu's MS2850A](#). The down-converter has low harmonic levels and excellent gain flatness, making it a good candidate to extend low frequency test equipment for millimeter wave testing purposes.

NOTE:

- On condition that test data is provided it is collected from a sample lot. Actual data may vary slightly from unit to unit. All testing is performed under +25 °C room temperature.
- On condition that simulated test data is provided, actual measured data may slightly vary.
- Eravant reserves the right to change the information presented without notice.

CAUTION:

- If a waveguide is present, any foreign objects in the waveguide will cause performance degradation and may damage or destroy the unit.
- For 1.35 mm, 1.85 mm, 2.4 mm, 2.92 mm, and SMA connectors proper torque should be applied: 8.0 ± 0.15 inch-pounds (0.90 ± 0.02 Nm). Torque wrench model SCH-08008-S1 is highly recommended.
