STO-1520305-CMC-S1

V-Band VNA Frequency Extender Set

(1) Tx/Rx Module and (1) Tx/Rx Module with Attenuator, 12.50 to 18.75 GHz Input

STO-1520305-CMC-S1 is a V-Band vector network analyzer (VNA) frequency extender Tx/Rx pair designed to achieve full 2-port, S-parameter testing at 50 to 75 GHz. One of the Tx/Rx modules includes a precision micrometer adjustable attenuator with 30 dB tuning range. It is compatible with modern vector network analyzers such as the Rohde & Schwarz ZNA, Anritsu VectorStar™, Keysight PNA-X Series, and Copper Mountain CobaltFx. The VNA needs dual sources to be extended. The frequency extenders can achieve a dynamic range up to 120 dB for certain passive products that require high rejection, isolation, and return loss testing such as directional couplers, orthomode transducers, and filters. An AC to DC Power adapter and **Proxi-Flange™ Contactless Flanges (STQ-WG-15010-FB-CF and STQ-WG-15025-FB-CF)**, are included. The Eravant calibration kit (**STQ-TO-15-S1-CKIT1**) and **Wave-Glide™ Rail System (STQ-TL-RW-S10-M1)** are highly recommended to complete the V-Band VNA test set. Each VNA extender is packaged individually in rugged equipment boxes with additional hardware and tools.
