

STR-793-12-D1

Radar Target Simulator, Direct Reading

STR-793-12-D1 is a radar doppler simulator that operates at 78.5 GHz with a bandwidth of ± 2.5 GHz and a WR-12 waveguide input/output. The simulator utilizes a single-sideband-modulator to modulate the incoming signal transmitted by the radar under test and sends back either a higher or lower band signal through a diplexer. The frequency-shifted signal is transmitted back to the radar under test as a Doppler signal. Target characteristics are adjusted by changing the I and Q channel frequency and phase. **Siglent's SDG1032X Waveform Generator** or equivalent is recommended. The routing attenuation is adjusted by the direct reading attenuator.

NOTE:

- Models with different operating frequencies are available under different model numbers.
- A 78.5 GHz Radar Target Simulator with a level setting attenuator, instead of a direct reading attenuator, is available as model **STR-793-12-L1**.
- Eravant reserves the right to change the information presented without notice.
- Eravant has performed test and recommends **Siglent's SDG1032X Waveform Generator** or equivalent in combination with our Radar Target Simulators.

CAUTION:

- Exceeding absolute maximum ratings shown will damage the device.
- Any foreign objects in the waveguide will cause performance degradation and may damage or destroy the unit.
- For 1.35 mm, 1.85 mm, 2.4 mm, 2.92 mm, and SMA connectors proper torque should be applied: 8.0 ± 0.15 inch-pounds (0.90 ± 0.02 Nm). Torque wrench model **SCH-08008-S1** is highly recommended.
