WR-08 Noise Source with TTL, 13 dB ENR

STZ-95314413-08-IT2 is a WR-08 noise source that delivers 13 dB nominal ENR across the frequency range of 95 to 140 GHz. The RF port has WR-08 Waveguide with UG-387/U-M Anti-Cocking Flange and the DC bias port is equipped with a female BNC connector, which is readily available for standard noise figure meter and noise figure analyzer interfaces. The noise source is designed with improved port return loss for more reliable and accurate noise figure measurements. The module can work also in either CW or pulse AM mode up to 1 kHz depending on the driving signal. The noise source features TTL triggering signal port for automatic test systems and a toggle switch to manually turn the module on and off. A Calibration Certificate for ENR values will be included.
